DENTAL CLINIC INTERIOR DESIGN AND FITOUT – 3 KEY AREAS OF FOCUS FOR A SUPERIOR SURGERY LAYOUT

With 20 years of experience, our team of experts in dental clinic design and construction brings a unique approach to transforming your practice. Using our proven process and a specialist construction team, we focus on improving both Patient Experience (PX) and User Experience (UX).

Our services cover every aspect of creating a functional and appealing dental environment, including dental office design, ergonomic surgery layouts and thoughtful office interior solutions. We prioritise functionality and practice design to ensure your space meets both aesthetic and practical needs. We currently cover London and areas across the South East of England.

Our design and fit-out process is organised into clear stages, providing a road map from concept to completion. From innovative reception ideas to optimised surgery layouts and equipment integration, we manage every detail. Additionally, we offer comprehensive dental surgery refurbishment services to upgrade existing practices.

DEFINE

Our workspace planning service lays the foundation for our design service by getting to the heart of the way you want to work. A dental architect understands the nuances of dental architecture. Our Dental Architects allow us to present the perfect experience from beginning to end.

We will take the time to understand the location and function of each surgery, the 'patient journey' and your needs in terms of access, dental surgery layout ergonomics, lighting, storage, mechanics, electrics and more. We will also analyse how you use your current space and identify areas for improvement.

We will help with creating brand new practices, refurbishments and individual surgeries. We bring the same insight and attention to detail to every project.

DESIGN

With 20 years of experience, we specialise in helping you design a dental surgery that reflects your unique needs and aesthetic preferences. Our goal is to create a space that aligns with the way you work while expressing your professional individuality.

The interior design of your dental surgery plays a key role in making a positive and lasting impression on patients. It not only helps to put them at ease but also allows you to create the atmosphere you envision — whether calm and traditional or fresh and modern.

Our approach ensures we maximise the potential of your workspace by designing surgeries from the 'mouth-out', focusing on functionality and flow rather than starting with the walls.

DELIVER

A project well planned is half-done! For complex assignments, efficient project management and effective liaison between all parties involved is essential.

We will take on the stress of your project, saving you time and delivering peace of mind. We appreciate that every day of surgery downtime is expensive, so we aim to minimise disruption as much as possible.

We have extensive insight into the optimum solutions to technical issues related to plant and equipment services, as well as in-depth industry knowledge of specialist companies who can add value to your project and ensure success.

Ergonomic Cabinetry Design for Seamless Workflow

At Anglian Dental, we understand that the efficiency of your clinical workspace depends on the careful planning of every millimetre. Our ergonomic cabinetry solutions are designed around the daily routines of your dental team, ensuring instruments and consumables are always within easy reach while maintaining clear, clutter-free surfaces.

We create cabinetry layouts that enhance the natural flow of your surgeries, reduce unnecessary movement and minimise fatigue during long clinical sessions. Every unit is designed for durability, easy maintenance and precise integration with your equipment, helping to maximise productivity and maintain a professional, organised environment that supports both patient and practitioner comfort.

Infection Control at the Heart of Every Design

Infection prevention is fundamental to safe and compliant dental practice design. Our team builds HTM 01-05 compliance into every aspect of your surgery layout, from zoning clean and dirty areas to selecting non-porous, easy-to-sanitise surfaces and finishes.

We design cabinetry and worktops with smooth, seamless edges to prevent dirt traps, and incorporate hands-free taps, touchless waste systems and integrated storage to keep critical surfaces clear. This meticulous approach not only safeguards your patients and staff, but also streamlines decontamination workflows, reducing turnaround times between appointments while ensuring your practice exceeds current infection control standards.
